

CABLE FAULT DETECTOR

CABLE FAULT DETECTION SYSTEM

CABLE FAULT DETECTOR

Description

The HVEX cable fault detection system offers a complete and effective solution for identifying and locating faults in power conductor cables. Comprising an intelligent tester, an impulse source, and an acoustic-magnetic locator, this system utilizes impulse signal, wave reflection, and acoustic principles for precise fault detection in cables, even if they are underground or within conduits.

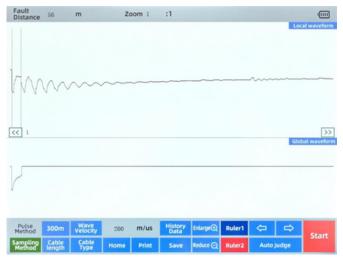

The tester controls the transmission of energy pulses, analyzing the reflected response to identify faults and estimate the distance to the fault point. The impulse source enhances the system's range and applicability, while the locator employs advanced principles of acoustics, ultrasound, and magnetism for precise fault point localization. This integrated approach provides a comprehensive solution for identifying, tracking, and locating faults in power conductor cables.

The cable fault detector features various arc reflection methods, low-voltage pulse method, pulse current method, attenuation method, and other new technologies. The set includes distance measurement, cable path integration. The equipment adopts a high-quality PP plastic case, which is compact, easy to carry; user-friendly interface, allowing for quick familiarization and use, providing efficient and accurate cable fault testing. The system test comprises the main system, fault locator, high-voltage impulse source, and cable path tester, used to test all types of cable faults, cable path, underground cable depth.

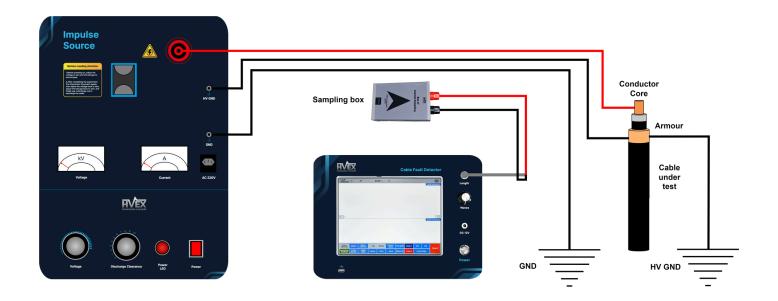

CABLE FAULT DETECTOR

Features

- Used for faults in power cables of different categories, sections, various media, and materials.
 Fault types include: open circuit, short circuit, low resistance, high resistance leakage, and high resistance flashover fault.
- Features a 10.4-inch industrial-grade touch-sensitive color LCD display, with menu-based operation and text prompts for achieving integration as a humanmachine interface.
- Built-in storage/retrieval function, facilitating data and waveform storage, or call for reanalysis.
- Built-in power supply (built-in battery), can be used for an extended period in environments without power supply.
- Small, lightweight, easy to use, with high fault detection success rate and test accuracy.

Operation

The Cable Fault Locator utilizes the principle of reflectometry (using wave reflection) in the time domain, meaning it sends an electrical pulse to the cable, which will be transmitted through the cable. When a change in cable resistance occurs (fault point), the electrical pulse is reflected. The fault locator displays changes in the emission and reflection of the electrical pulse in the timedomain format through a graph presented on the LCD screen, and the distance to the fault can be interpreted directly through the waveform displayed on the screen, as well as presenting the fault location distance.

Technical Specifications - Cable Fault Detector Main Case

Power supply	Built-in battery
Power supply	Built-III Dattery
Continuous operation	> 4 h
Sampling method	Low voltage pulse
	Impact Flashover
	50 m
	300 m 1 km
	2 km
Cable length	5 km
	10 km
	30 km
	60 km
Wave Speed Setting	Cross-linked ethylene
	PVC
	Oil impregnated paper
	Non-dripping oil
	Unknown
Impact high voltage	≤ 35 kV
Test accuracy and resolution	1 m
Display	10.4" colorful LCD Touch screen
Dimensions	370 x 270 x 220 mm (L, D, H)
Weight	2,5 kg

Technical Specifications - Acoustic Magnetic Cable Fault Locator

Power supply	Rechargeable built-in battery
Battery operation time	> 12 h
Display distance	Minimum: 0,1 m
	Maximum: 99,9 m
Maximum error	10%
Fixed point method maximum error	0,1 m
Path measurement	Lenght: 20 km
	Error: 0,3 m
Electromagnetic channel gain	≥ 110 dB
Electromagnetic channel receiver sensitivity	≤ 5 µV
Sound channel audio amplifier gain	≤ 120 dB
Power frequency suppression ability	> 40 dB
Maximum power consumption	0,7 W

Technical Specifications - High Voltage Impulse Source

Input	220 VAC ± 10% 50 Hz
Output	0 to 28 kVDC ± 5% continuously adjustable, 30 mA
Discharge energy	1800 J
Capacitance	4 µF / 30 kV
Spheres gap	0 to 10 mm (adjustable)
Weight	21 kg
Temperature	- 10 °C to 40 °C (14 °F to 104 °F)
Altitude	≤ 1000 m
Relative humidity	≤ 85%

We provide solutions for improvement of eletrical energy generation, transmission and distribution efficiency, quality and reliability. With a highly specialized and experienced team in research, delvelopment and innovation, HVEX develops tailor-made solutions for brazilian and foreign markets. Wide range of products with solutions focused on signal transduction, measurement, monitoring and protection.
